AI Compliance Automation Platform

Strategic Business Plan & Market Architecture (Colorado Focus)

Target Launch Window: Next 30 Days (Pre-January 1, 2027 Regulatory Shift)

1. Market Landscape & Legislative Catalyst

Your launch timing puts you significantly ahead of the game due to an unprecedented regulatory shift in Colorado:

- **The New Standard (SB 26-189):** Following the repeal of SB 24-205 in May 2026, Colorado enacted Senate Bill 26-189 (the Automated Decision-Making Technology Act). This framework shifts enforcement from engineering code audits to strict disclosure, transparency, and consumer adverse-outcome tracking.
- **The January 1, 2027 Deadline:** Businesses using automated systems have a narrow window remaining to build tracking infrastructure before enforcement starts.
- **Severe Penalties:** Non-compliance carries structural fines of up to $20,000 per violation under the Colorado Consumer Protection Act, fully justifying a premium prevention retainer.

2. Technical Architecture & Product Offerings

Your platform leverages Python, Claude AI, and Hostinger to orchestrate end-to-end operational defense through a specialized three-part pipeline:

1. **Context Scanner:** Ingests multi-page software agreements, vendor terms, and HR handbooks via Claude AI to isolate hidden liabilities and flag whether tools fall under state ADMT rules.
2. **Dynamic Compliance Calendar:** Converts legal obligations into an interactive schedule via Python, plotting mandatory 90-day vendor reviews and record-retention markers directly into client enterprise systems.
3. **Resource Vault:** Instantly generates tailored, plain-language rejection disclosure templates and compliance forms, eliminating manual paperwork.

3. Target Verticals & Product-Market Fit

While widely applicable to any HR department, the **Construction Industry** represents a premium vertical due to unique operational realities:

- **High-Turnover Crew Hiring:** Automated candidate screening tools immediately trigger Colorado's disclosure and 30-day explanation rules.
- **Subcontractor & Vendor Liability:** The law holds the deploying business liable even if software is supplied by a third party. Your agent runs automated vendor contract reviews to clear supply chains.
- **Safety & Scheduling:** The system cross-references local milestones, computer vision logs, and OSHA timelines to keep safety programs audit-ready.

4. Subscription Pricing Strategy

Positioning your platform as an automated high-end bespoke service ensures massive financial margins while remaining a cost-effective alternative to law firms.

Subscription Tier	Target Client Profile	Monthly Pricing
Starter Tier	Small contractors & boutique HR departments. Includes up to 3 software scans, calendar mapping, and basic asset templates.	**$2,000 / mo**
Growth Tier	Mid-sized firms and scaling operations. Offers unlimited contract scans, multi-user dashboards, and continuous compliance alerts.	**$3,500 / mo**
Enterprise Tier	Large civil engineering and multi-state corps. Adds custom system APIs, dedicated server resources, and multi-state frameworks.	**$5,000+ / mo**
